2025/12/07 20:23 1/1 Water filter

## **Water filter**

We recommend to use a water filter with the incoming water to the high-pressure washer (filter placed before the high-pressure washer). Water isn't always clean and the particles can make wear and tear on the high-pressure washer and the nozzle. Dirty water can also clog the water valve, which leads to "Water pressure too high"-alarm.

A water filter
