Water pressure too low

This is a hard alarm.

Description

Low water pressure was detected. The water pressure was below about 50 bar for more than 2 minutes.

Troubleshooting

- Check the water hose for damages/leakage
- Check on the right side of hose reel if lock ring has jumped off
- Check swivel and hose that goes to the magnetic valve for damages/leakage (right hose reel side has to be taken off)
- Check that the pressure washer delivers water with sufficient pressure
- Make sure the pressure washer is in good condition. Pressure washers needs service too.
