Item is missing

Description

Location, program or recipe is missing. Either the item is not listed or the selected item is told to be missing.

Troubleshooting

If the item is missing in the list it may have been accidentally removed.

If the message “SELECTED ITEM MISSING! PRESS HERE TO SELECT ANOTHER” is displayed the listed item does not exist on the computer. Reasons for this can be:

- The given item name is too long. It should not exceed 30 characters or it will be truncated by the computer.
- The item is corrupt after interrupted editing

Please contact Envirologic for help with restoring the item.
